

15" Projective Capacitive 10pt touchscreen

The ProLite T1521MSC-B2 15” touchscreen is based on projected capacitive technology, offering optimal seamless and accurate touch response. Due to its glass overlay, it guarantees high durability, scratch-resistance and perfect picture performance. A solid and steady base supports the touchscreen with an adjustable stand offering up to 70 degree tilt angles. Menu buttons are located on the back of the screen which can be locked to prevent tampering, and includes a handy function to deactivate the touchscreen for cleaning. The ProLite T1521MSC-B2 is an incredibly powerful touch solution, perfect for instore retail purposes.

Touch technology - Capacitive

This technology uses a sensor-grid of micro-fine wires integrated into the glass that covers the screen. Touch is detected because electrical characteristics of the sensor grid change when human finger is placed on the glass. Thanks to the glass overlay this technology is highly durable, and the touch function remains unaffected even if the glass is scratched. It offers perfect picture performance and will work with human finger (also latex gloved) and stylus-pen.

Scratch resistance

Scratch resistance is a critical requirement for touch solutions deployed in commercial, educational, and industrial environments. A protective glass overlay covering the screen provides enhanced durability, ensuring reliable touch performance over time. The touch functionality remains fully operational and unaffected.
